# NOVUS MY flat-screen holder

## SOLARLUX creates the vision of transparent architecture

Solarlux is a leading manufacturer of individual glazing systems. From the glass folding wall to tailored facade solutions: Solarlux drives the vision of transparent architecture forward. This vision has now been put into practice as part of their own new building. The company combined business locations and production into one impressive campus, and is setting an example not only in terms of architecture, but also when it comes to sustainability and the working atmosphere. Thanks to the company's own facade systems, each workstation has a view of the new, spacious gardens, forming the ideal workplace layout with innovative design concepts.

### Innovative flexibility in the workplace with NOVUS MY

All desks were designed to create workstations that encourage movement: employees can adjust the height of their desks at the touch of a button and work either while standing or sitting. This position switching is facilitated by the MY system holders from NOVUS, which features a support arm that can be rotated smoothly in any direction with adjustable height options. The monitor can therefore be adjusted to the ideal position by hand. The NOVUS MY twin arm even allows you to attach two monitors.

**NOVUS MY** is a clever system that brings a new ease of movement to your desk:

- Flexible work options due to NOVUS MY support arms and holders for flat screens
- Adjust the desk to work while standing or sitting
- Smoothly adjust the screens to suit individual requirements
- Ideal positioning for two monitors at a workstation
